## Agricola

We owe much to the pioneers of our west. There were pioneer doctors, pioneer printers, pioneer preachers and pioneer teachers. But the pioneer 'par excellence' was the farmer. He was preceded by the rancher whose range he destroyed. But real settlement came with the homesteader. And many who are now in business or the professions have had their turn on the land. And now if he has done no more, we must doff our hats to him.

Now while his produce does little more than employ elevator and railway hands, the cash from that produce has kept our towns and cities in existence. As far as the west is concerned, when the farmer can't buy there are few who can.

But the farmer has much more than a cash value. Granted that sometimes he has not progressed as rapidly as his urban brother, we may indeed be thankful for his conservative stability. Nevertheless the western farmer has shown originality and while his progress has not been spectacular, it has been consistent.

And now drought and markets have left him high and dry. He does not require our pity but he may well demand our sympathy. Though his buying power has diminished, that pioneer spirit refuses to be crushed. His steadiness is undisturbed. In these times he has still his contribution to make. So we continue to love and respect him.

UNUS SOLUS.

Cow's milk which average 87 per cent water and 13 per cent solids, is richer in winter than in summer because dry food produce better milk than green feeds of pasture.

Swarms of locusts have invaded 800 square miles in the Argentine provinces of Santa Fe, Cordoba, and Santiago del Elstero, threatening the crops including wheat, maize, and sugar cane.

A good many years ago Spain had a newspaper called the Luminaria, which was printed with ink mixed with phosphorous, so that it could be read in the dark.

Although not famed for cleanliness all natives of India take great pains in cleaning their teeth, rinsing their mouths and ever washing their hands, faces and feet, before as well as after each meal.

Lawyer—It would be better if you could prove an alibi. Did anybody see you at the time of the crime?

Client—Fortunately, no.

# WHO'S WHO

(By Gee)

## George C. Rooke

ONE of the great anxieties of visitors to huge exhibitions is the result of the lack of or indefinite information regarding suitable accommodation for meals and lodging. When the World's Grain Exhibition and Conference opens at Regina in 1932 these two very important matters will have been considered and provided for.

A special accommodation committee has been constituted to look after these important details and under the chairmanship of George Cyril Rooke, of Regina, is busily engaged in seeing to it that ample accommodation will be available when the thousands of visitors expected in 1932 reach the capital city of Saskatchewan.

Mr. Rooke, who is the senior partner in the chartered accountancy firm of G. C. Rooke & Company, was born at Durham, England, in 1883. Coming to Canada his education was directed toward accountancy and he is an F.C.A. and B.Acc. of the University of Saskatchewan.

Here are some of the public activities of the man whose central interest in the World's Grain Exhibition and Conference is to see that all visitors are assured of adequate accommodation: Past president of the Regina Board of Trade, Regina Rotary Club, Saskatchewan Institute of Chartered Accountants, District Governor Rotary International District No. 4, president 1930-31 of the Dominion Association of Chartered Accountants.

Mr. Rooke served with the 2nd C.M.R.'s in the South African War. He founded his present business in 1912 and for some years prior was associated with several large commercial institutions of Saskatchewan in accounting work. He has served on the Senate of the University Examining Board in accounting. He is an active member of the Assiniboia Club, the Wascana Country Club, the Wascana Badminton Club and Emulation Lodge, A.F. & A.M.

## PRIZE ESSAY AT SCHOOL FAIR

(Continued from page 1)

At the age of twenty-three he gave up teaching and entered Dalhousie Law School. His first Law practise was at Chatham New Brunswick where part of his leisure moments were spent campaigning for his party. He also assisted the secretary of the Methodist Sunday School by lecturing in Temperance Hall. His people were of Devote Baptist Faith.

Thus he possessed a love for the greatest of Literature, the "Bible" which he has not lost during all his years of Law practise and Political career. It is said that not since the days of Sir Wilfred Laurier has there been a politician so well versed in the scriptures.

He has had the money and the leisure to travel, he has read and knows books, his association with big business men has brought him into contact with the keenest minds of today. To the public he is known as a friend to all, both rich and poor alike. His good will, kindness and congenial manner has won a place in the hearts of many friends throughout Canada.

The alluring west held a fascination for his adventurous soul, so in 1897 he came to Calgary as a lawyer.

Never hoarding money for himself but circulating it for the good of Canada in the way of fighting for Canadian enterprises, he won a place for himself as a true Canadian.

In 1911 he came to parliament and there we first hear of him politically.

In 1917 defying his party and oblivious to passion of war, he risked his whole political career and personal popularity for what he believed to be the sacredness of the constitution. Thus I have endeavored to carry you through the early life history of Richard Bedford Bennett, and leave you with

these thoughts in mind that our Honorable Premier is a man worthy of our thought and respect.

## ORATORICAL CONTESTANT AWARDED PRIZE

(Continued from page 1)

well Hill, nine miles from Hopewell Cape, New Brunswick, overlooking the rolling tides of the Bay of Fundy.

He was not born with a silver spoon in his mouth as the saying goes but he had several advantages which enabled him to find his path to premiership not quite so difficult.

Richard Bennett was indeed a Blueblood from a long line of ancestors and his parents were of sufficient means so that the energy which, though he is over sixty carries him as a man of under forty was not used up in the days of his early youth.

Richard Bennett's Mother was a school teacher before her marriage and this wise woman early taught her son to develop a sound mind in a sound body and made him promise to abstain from all liquors and tobacco. As a result he has remained a total abstainer and has never smoked. He has also kept a boyhood promise to attend church at least once every Sunday.

His childhood days were spent reading and studying the biographies of great men of all times. Thus he laid a foundation within his own life of honest thought and noble ambition.

The old timers of Hopewell Cape remember Richard Bennett as a boy who did not go out to play with the other boys but as one who continually read and even today his favorite recreation is reading histories and biographies.

The people even in the remote parts of New Brunswick have always taken a keen interest in politics and so in the days of his early youth, the

policies of Governments always attracted him.

Richard Bennett was completing his public school studies when his father died, but a legacy left to his mother enabled her to pay his way through the Fredericton Normal School. He made the most of his opportunity and obtained a first class teaching certificate in one short year. School teaching, though, did not long hold his interest. The study of law attracted him and he was given the chance of studying law in the office of L. J. Tweedie.

In 1893 young Bennett went to Dalhousie University and graduated from there with first class honours in the study of Law at the age of twenty-three. He then became the partner of L. J. Tweedie, the plate over the door reading, Tweedie and Bennett, Barristers at Law.

In 1897, Bennett heard the call to the west and Mr. Tweedie lost his ambitious partner while Senator Longhead of Calgary placed his trust in the serious minded young man who stepped off the train in the old C. P. R. Station in Calgary 34 years ago.

Senator Longhead's trust was not misplaced for day after day Bennett was the first to enter the office and the last to leave and soon became recognized as a lawyer of remarkable ability.

Politics still interested him and in 1893 he was elected to the Legislative Assembly of the North West territories.

His next important nomination was for a seat in the Dominion House of Commons and so here we close his early career, when he succeeded in gaining the seat in the House of Commons which ultimately led to his nomination as Leader of the Opposition and finally as Premier of our Great Dominion.

Like other great men before him, he attributes his success to his Mother and in a letter to her from his seat in the House of Commons he wrote, "All I am, all I ever expect to be, I owe to you, Mother."

National Crop Improvement Service.)

"Repeated baking tests have shown that Marquis wheat makes a loaf of very much finer quality than any other of the wheats; that the bunnings will make a loaf fairly large in volume but yellow in color and coarser in texture.

"As the rust menace spreads, there will be great temptation for Canadian farmers to grow a so-called rust resistant wheat. The worst of these is probably Red Durum, which was introduced in North Dakota at a time when rust was making terrible attacks on the world's wheat. This wheat is rather prolific and has a heavy kernel, but should not deceive the farmer because this wheat will not make bread nor macaroni, and its only merit is that it is heavy and may be used in export to improve the weight of light and chaffy grains," says Mr. Bert Ball, director, Spring Wheat Crop Improvement Association.

"The Canadian Northwest grows the best spring wheat in the world and flour made from it always sells for a superior price. If Canadian farmers will breed quality, and market only their finest wheat, mills will always pay a premium for fancy flour."

## The Health of the School Child

This is issued by the Department of Health of the Province of Alberta.

At this season of the year everyone is interested in the re-opening of our greatest state project—the school. Throughout the Province of Alberta thousands of little boys and girls will leave the sheltered atmosphere of the home to start out on great adventure of school life. These boys and girls have now entered a field that will become increasingly competitive as the years go on. The thoughtful observer will be impressed with the possibilities that lie before this great little army. We have been educated to believe that manhood and womanhood are the state's greatest potential assets. President Hoover has said that our children are the army with which we march to progress. However the reverse of the statement is also true and our children may well become the army by which we march to national chaos. Every individual who is deficient in body mind or morals is a liability to the state. The Province of Alberta is feeling the provision for such individuals an ever-increasing burden as it grows older. What of the future? Will the provision for our physical, mental and moral deficiencies become a burden so great as to cripple the state?

The home, the school, the municipalities and the state each has a responsibility towards the child in school. The progress of that child will depend upon the manner in which each responsible body discharges its

duty. If any one should fail then the child must suffer.

School and community health is more a question of education and prevention than of treatment. The child should be taught to think health. Fear-thought of disease should give place to fore-thought in prevention.

Certain diseases are preventable. No child should start to school before he has been vaccinated against Smallpox and immunized against Diphtheria, Typhoid Fever and Scarlet Fever are also preventable where parents are willing to co-operate with physicians and health authorities in the prevention of these diseases.

Every school child should have a complete physical examination at least once a year. Such examinations may reveal early eye strain before the eyes are damaged permanently.

Carious teeth and septic tonsils are discovered before the discharges from them have poisoned the whole system. Early Tuberculosis is detected while there is still a good chance for successful treatment. The physician and the teacher should always be on the alert to discover and correct postural defects.

## What Is Your Child Worth

What's your child worth to you? What will your child be worth to you in ten years time? What will he be worth to the nation? The future man is the boy of to-day, and the kind of man he will make depends a great deal on the food he eats; and this is something that pertains entirely to the present and is of supreme importance.

Let us look at the requirements of that boy in the home. First, he is growing—he is adding daily to his stature in the form of bone and muscle; second, he is very active and consequently wearing out body cells in great quantities. Now, there is only one way in which the growth and repair can be maintained, and that is by the food which he eats.

Years of study and experience have shown that food constituents, essential to an adequate diet are:

1. Energy producing material.
2. Satisfactory proteins.

## Queenstown News

Mr. Harry White has returned from a short trip to Saskatoon, Sask.

Mrs. Wm. Blair is spending the week in Calgary, visiting with friends.

Mildred Eller celebrated her eleventh birthday Sunday by having a number of her friends in to a chicken dinner.

Jerry Large is back at his desk at the bank here after relieving for Mr. H. B. Nelson, banker at Milo.

Mr. Morgan, who has been connected with the Crown Lumber Co., here for the past few months, has moved with his family to Munson, Alta. Mr. H. J. Eller, of Queenstown is looking after the lumber yard here at present.

Mr. and Mrs. T. F. Stone, formerly of Queenstown who are spending some visiting their son, C. C. Stone, of Elkins, W. Va., U. S. A., writes that the weather there is somewhat similar to ours and the attitude about the same. Mr. Stone says to keep the Calgary and Arrowwood papers coming as he doesn't intend to lose track of his friends in Alberta.

3. Suitable mineral matter.

4. Water.

5. Substances, which for want of a better name are called vitamins.

Without going into the history or chemistry of vitamins we will take the results of experiments performed by scientists.

They have demonstrated that vitamins are absolutely essential to growth and to the maintenance of health. Thus growing children need foods containing vitamins and milk is the best food for that purpose. These vitamins are found in milk, eggs, and leafy vegetables.

All foodstuffs contain one or more of the above mentioned five elements, but milk is one of the very few foods which contain all of them in proper proportion. This is why milk promotes rapid growth and why it is a superior and important article of diet.

Tommy—"Mother, let me go to the zoo to see the monkeys."

Mother—"Why, Tommy, what an idea! Imagine wanting to go to see the monkeys when your Aunt Betsy is here."

Mandy: "Rastus, you all reminds me ob one ob dem flyin machines."

Rastus: " 'Cause Ah's a high flyer, Mandy?"

Mandy: "No. 'Cause you is no good on earth."

## Reduce the Possibility of a Grasshopper Outbreak

1932

Serious outbreaks of grasshoppers occurred in many localities of Southern Alberta this year. Fodder loss was distributed from twelve centres in this area. Indications point to a general outbreak over all of Southern Alberta in 1932.

## Take Preventive Measures Now

Certain preventive measures, costing very little, taken during the autumn or spring months, may save thousands of dollars in material and labor next year.

The female grasshopper deposits eggs in clusters in the top inch of the soil surface. Many of these eggs may be destroyed by the following practices:

(1) Shallow cultivate or shallow disc stubble fields to expose the eggs to the weather.

(2) Spread straw and burn, roadsides, headlands, fence corners, abandoned fields, or any grassy or weedy plots; about one week after the small grasshoppers can first be found in the spring.

(3) Fall or spring plow stubble lands to a depth of at least 5 inches, being careful to turn the furrow slice completely over, and, if possible, pack the land following plowing.

For further information, write THE HILL CECIS COMMISSIONER, DEPARTMENT OF AGRICULTURE, EDMONTON, ALBERTA.

Hon. George Hoadley,  
MINISTER of AGRICULTURE.

H. A. Craig,  
DEPUTY MINISTER of AGRICULTURE

## Thumb Sketches

Up-to-date

IT'S great, and commendable to be up-to-date, even up-to-the-minute, in the things that we think, that we wear, that we do—mostly, but not always. There are exceptions to most statements such as this and there are a lot of exceptions to this one.

Science of course, during the last decade or so has been making wonderful strides. Society has been the beneficiary. Society continues to profit by the research of the laboratory, and movements are constantly on foot to spread abroad to all the ends of the earth the benefits thus attained.

Medical men, sanitary engineers, manufacturers, technical and practical men of all kinds plan national and international gatherings for the purpose of pooling the results of their discoveries and giving to the world the best they have to offer.

The tiller of the "top six inches" is abreast of the rest. He, too, has planned a great world-wide conference upon the problems of field crop production—a sort of pooling of the beneficial results of research in the field of providing food and fodder for the world's millions—the World's Grain Exhibition and Conference to be held at Regina in 1932—the first great world-wide exhibition and conference ever held at any time in the interest exclusively of grain and seed. While being up-to-date along these lines—and many others—is surely commendable it is a bit doubtful at least if the stamp of similar commendation should be placed upon some others.

"We are adopting a more sensible attitude towards love," says a modern writer. "We have learned to stem sentiment, to treat romance with common sense, to be normal about emotion."

Just so, but has not ultra-modernism lost much of its hold upon something of infinitely greater value? Are not the kisses of too many girls too cheap—too shoddily cheap. Are not necking and insincere love making taking up too much of the evening programme? Does not modern familiarity with the person breed contempt? Are we not losing the delicate charm and courtliness of other days? Isn't the "it" element of human nature so constantly before us as to become common—common in its original sense? Are we not, in sentiment and romance, paying too much attention to the things that are transitory and selfish? Is there not much solid opinion to say "yes" to these and a lot of other questions of like nature? If the ultra-modernist really understood sentiment, romance and emotion better and rid these of a great deal of the up-to-dateness there would not be so many broken engagements, so many hurtful flirtations, so many tragic marriages and so many disastrous divorces—a dust heap and refuse dump that soils and stench the whole fabric of modern society.

## Happenings In And Around Arrowwood

The many friends of Mr. Hugh Leslie will be glad to hear that he is able to be around again after his recent illness.

Mr. Bruce, provincial fire inspector, was a visitor to Arrowwood this week, inspecting fire risks.

Mr. and Mrs. J. Shearer of Black Diamond visited in Arrowwood over the week-end.

Mr. and Mrs. R. R. Saunders visited with friends in High River and Okotoks, Tuesday.

The P. T. A. will meet at the home of Mrs. J. C. MacLeod, on Monday, October 5th, at 8 p.m. All parents are invited to attend.

Russell Burris, Melvin Bowman and Paul Irwin left for Calgary on Monday to attend school. Russell and Melvin are to attend the Institute of Technology and Art and Paul is to attend the Commercial High School.

Judging from the size and quality of potatoes brought to Arrowwood by Harry Ellis we must have had a wet season or Harry wore out 2 or 3 hoes. They are some spuds.

Fresh eggs are not as plentiful as they were earlier in the summer the demand for harvest consumption absorbing the supply.

The past ten days of fair weather has been responsible for the threshing of a large acreage. Another week will about clean up the balance.

B. S. Corey, of Calgary, was down Tuesday looking after the interests of his farm east of Arrowwood.

The Junior U. F. A. will meet at the home of Mr. and Mrs. E. Lewendon at 8.30 p.m. on Tuesday.

Earl Larsen of Weldon, Sask. arrived in Arrowwood on Tuesday to assume his duties in the bank here.

Mr. and Mrs. J. S. Culp and Mr. and Mrs. Lawrence Larsen and daughter Arla Jean visited at M. C. Nortons on Sunday.

The Arrowwood Ladies Guild will entertain the Blind Creek ladies at the regular meeting to be held at the home of Mrs. M. Henry of Mossleigh on Thursday Oct. 9th.

Despite reverse farming conditions this year, the Arrowwood district is still able to make creditable returns. Mr. Walter Steiner, successful south country farmer, reports having threshed Ruby wheat that averaged 20 bushels to the acre and 62 pounds to the bushel.

The local garages have successfully completed the first round in their service of only one garage remaining open on Sundays. This Sunday the West End Garage will be at your service.

The worth of the agricultural pursuits in the Arrowwood district was evidenced this week when Mr. W. C. Lyle handed a box of ripe strawberries into the "Resource" office. The berries are of the ever-bearing variety and they are rich in flavor. He stated that this patch contains berries in a generous quantity in every stage from blossoms until the full development of rich, ripe fruit.

## School Notes

The Arrowwood High School girls' basketball team distinguished themselves in a masterly manner last Tuesday when they conquered the Milo team 8-2. Smarting under last Saturday's defeat by the close score of 9-8, the Arrowwood team put up an exhibition of that fighting spirit which carried them to victory.

After the toss-up both teams were playing carefully but it was not long until Irma Arney the crack-shot of Arrowwoods team, brought the fans to their feet by a beautiful field basket from the corner. Shortly afterwards she again duplicated this feat with another brilliant shot.

Coming back after half time the Arrowwood team put up a strong defense and relied on long shots to lengthen their lead. Mildred Kauffman disheartened the Milo team when she dropped a perfect field basket from near centre. Irma Arney circled the ring with another fine shot making the score 8-0. Milo put on a closing rally which resulted in the only basket of the game for them when Pauline Morseth made the most sensational shot of the day. The canny playing of Jean McLeod and the invincible defence of Edna Beagle add Evelyn Burris featured to a great extent for Arrowwood. It is of interest to know that the girls who represent Arrowwood are practically a new team this year, playing together for the first time. The game was refereed in a very capable manner by Omer Larson.

Lineup: Milo, Nelsie Peterson  
Audrey Anderson  
Pauline Morseth  
Lucy McIntyre  
Margaret Thomas  
Ruth Northcott  
Louise Herman  
Ina Jones

Arrowwood, Jean McLeod  
Mildred Kauffman  
Irma Arney

## To the Exhibitors at the School Fair

Now is the time to begin making your plans for next year's fair. A school fair is a very good illustrative lesson for us and what it teaches us should help to make the next exhibition "a bigger and better than ever" event. When you plant your plots next spring don't forget that we are headquarters for efficient machinery such as platters and cultivators that will help make yours a prize-winning exhibit.

Housewives, did you ever catch your husband Flirting? Of course we should know better as no doubt that was the very way you did catch him. Now if that old tire on the family car is getting quite thin he is flirting again—only this time it is with death and before something terrible happens, have him replace it with a new "Firestone."

Farmers—These days lines of conversations drift to various problems of depression. You know there is the story of the farmer who had two cars, a Ford and an Austin. The de-

pression hit him so hard that he got ride of the big car. Now our remedy in this case is run both cars on distillate. We have several customers that are using our distillate equally as well as gasoline in their cars at only half of the cost. Too, the use of distillate in the tractor and combine motors is one way to reduce the overhead of farming.

Speaking of unemployment, the average man has 12,000,000,000 brain cells.

Remember our service stands behind anything we sell.

Good Equipment Makes a Good Farmer Better
